

## ScriptSure 2012 System Requirements

### ScriptSure Installed Locally In Office

- ScriptSure is optimized for Windows® 7 Operating System. ScriptSure is a **CLIENT-SERVER** application with a required client and server install. The patient data resides on one computer (Server) in your office and the other computers (Clients) on the same network as the Server can access the patient data. *For small offices, the Server and the Client installs can be on the same computer.* The above specs are for the Client computer(s), however, a computer with the *Recommended Components* below specifications will be able to act as a Server for up to 2 computers. Three or more computers will require a more powerful server (please contact sales for more information on the required specifications for a Server). The Server computer should always be the most powerful computer in the office. **NOTE:** Windows® XP® is no longer supported for ScriptSure software products.

	<b>Minimum Components</b>	<b>Recommended Components</b>
<b>Processor</b>	Intel® i3 Processor 1.4Ghz+ 32-bit or 64-Bit computer	Intel® i7 Processor 2.20Ghz+ 64-Bit computer
